Redistricting Requirements and Goals

- Each district should have approximately equal population
- The target population for each district is determined by dividing the total population of 1,510,271 by five to get 302,054
- California election code states that the districts shall be “as nearly equal in population as may be...” Case law suggests that the maximum allowable variance -- from the district that is most ‘over’ the target to the district that is most ‘under’ -- can be no more than 10%
- California law and the Alameda County Administrative Code stipulate the following factors to consider in drawing districts:
 - Districts should be contiguous and use easily identifiable geographic boundaries
 - Preserve communities of interest
 - Comply with the Voting Rights Act of 1965 to assure fair and effective representation for racial and language-minority groups
